Exemption on Machinery and Equipment
Used to Increase Productive Output

Currently, expanding businesses seeking a sales and use tax exemption on purchases of industrial machinery and equipment must show an increase in productive output of not less than 10 percent to qualify for the exemption. Effective January 1, 2013, the required increase in productive output has been reduced to not less than 5 percent to qualify for the exemption. The increase is generally measured by comparing the number of physical units produced for 12 continuous months immediately after completion of the installation of qualifying machinery and equipment to the number of physical units produced over the 12 continuous months immediately preceding such installation.
