

2024 Assessment Roll Edit Guide for NAL, SDF, and NAP

Intended Users

This edit guide is intended for Florida property appraisers and their staff as an aid in preparing and producing the assessment rolls for submission to the Florida Department of Revenue (Department), Property Tax Oversight program as sections 193.114 and 193.1142, Florida Statutes, require. This document is not intended for any other users.

Introduction

The Department analyzes data fields on submitted assessment rolls (Name-Address-Legal (NAL), Sale Data File (SDF), and Name-Address-Personal (NAP)) to determine whether the data on the rolls complies with the complete submission standards under s. 193.114 and 193.1142, F.S. To determine if the data complies with the complete submission standards, the Department runs the data through a series of data edits. These data edits check the validity and accuracy of the data the property appraisers submitted on the NAL, SDF, and NAP rolls.

NAL Edit Report

The **NAL** portion of this edit guide (pages 2 - 41) includes the data field edits and logic for the NAL data file. Data edits on the NAL roll submissions are categorized by levels coded 1 through 4. Level 1 and 2 data edits identify data fields for review and, if necessary, correction.

Level 1 and 2 edits may not require corrections, depending on the data variations in a particular county.

Level 3 edits are a higher priority and indicate data quality issues that the county should promptly review and correct. *Note: Any Level 3 edits with an unusually large number of identified discrepancies will require the county's written response and possible resubmission.*

Level 4 edits with identified data discrepancies require the property appraiser's written responses and/or corrections before the Department will consider a roll as a complete submission. Property appraisers must submit to the Department written notice of responses and/or correction for all Level 4 edits before the preliminary assessment roll can go to the approval process. Property appraisers should submit these notices within the 10-day complete submission window.

SDF Edit Report

The **SDF** portion of this edit guide (pages 42 - 46) is a summary report composed of sale data field edits. For the SDF edit report, edits are designated Levels 1 through 3. The sale data field edits identify discrepancies that the Department reviews to determine the extent of the discrepancies and the number of parcels involved. The Department calculates a discrepancy rate for the sale data field edits. The discrepancy rate is the number of discrepancies divided by the total number of sales submitted. Sale data field edits have an assigned discrepancy threshold of 5 percent. The Department will communicate these discrepancies to the county by telephone and a follow-up email. The county must take corrective action where required. **Note:** The Department may request a resubmission on all edit levels based on the extent of the discrepancies (s.193.1142(1)(b), F.S.).

Level 1 SDF Data Edits. Level 1 edits (edits 1-13) identify where the discrepancy rate falls below the 5 percent threshold for sale data field edits. Property appraisers should use this information to ensure the SDF is accurate for all future SDF roll submissions.

Level 2 SDF Data Edits. Level 2 edits (edits 1-13) identify where the discrepancy rate exceeds the 5 percent threshold for sale data field edits.

For the April 1 SDF submittal, if the discrepancy rate exceeds the 5 percent threshold, the property appraiser must submit a written explanation for the discrepancies, make the necessary corrections or resubmit the roll.

For the preliminary SDF submittal, if a discrepancy rate exceeds 5 percent, the property appraiser must provide a written explanation for the discrepancies or make the necessary corrections to the roll and resubmit the roll within the 10-day window for preliminary roll complete submission.

If a discrepancy rate exceeds 5 percent on the final SDF submission, the property appraiser must provide an acceptable written explanation for the discrepancies or make the necessary corrections to the roll and resubmit. Failure to provide corrections may result in a post-audit review.

Level 3 SDF Data Edits. All Level 3 edit discrepancies (edits 20 and 23-25) require the property appraiser to correct errors and resubmit a new SDF or submit a written notice of correction to the Department. Level 3 discrepancies indicate a possible systemic problem. If any Level 3 edit discrepancies are identified on the April 1, preliminary, or final SDF, the property appraiser must correct and resubmit the roll.

NOTE: For edits 14-19 and 21-22, the Department will review these edits and determine the extent of the discrepancies and the number of parcels involved. A written explanation or resubmission of the SDF may be required.

NAP Edit Report

The **NAP** portion of this edit guide (pages 47 - 48) includes a description of the NAP data field edits. Counties must review the identified data discrepancies and submit written responses to the Department within the 10-day preliminary roll complete submission window. The Department will review the NAP file with data quality and field population edits.

Level 1 edits do not require a response. Level 1 edits not corrected in a timely manner, or a substantial number of flagged accounts may cause edits to escalate to Level 2 or 3.

Level 2 edits require property appraisers to submit a written response(s) and/or correction(s) to the Department for all Level 2 edits before the preliminary assessment roll can go through the approval process. Property appraisers should submit these notices within the 10-day complete submission window. Level 2 edits not corrected in a timely manner, or a substantial number of flagged accounts may cause edits to escalate to Level 3.

Level 3 edits identify data discrepancies and require the property appraiser to resubmit their NAP roll before it will be accepted and moved to the next stage of the complete submission process.
